Career Objective

Aspiring Assistant Professor in Computer Science with a strong foundation in programming, data structures, and artificial intelligence. Passionate about teaching, mentoring students, and simplifying complex concepts. Seeking an opportunity to contribute to academic excellence while continuing research and innovation in AI-driven systems.

Subjects of Interest

- Data Structures & Algorithms
- Artificial Intelligence
- Computer Networks
- Database Management Systems
- Operating Systems

Education

M.Tech in Computer Science and Engineering	2026
Impact College of Engineering and Applied Sciences, VTU	
B.Tech in Computer Science and Engineering	2024
Impact College of Engineering and Applied Sciences	
PUC (PCMC)	2018
Seshadripuram PUC	
10th Standard	2015
New Priyadarshani School	

Technical Skills

- **Programming:** Python, Java
- **Web Technologies:** HTML, CSS, JavaScript, React JS
- **Databases:** MySQL, Oracle SQL
- **Tools:** Streamlit, Eclipse, Visual Studio, Android Studio, GitHub

Teaching & Academic Activities

- Assisted peers in understanding core subjects like Data Structures and Programming
- Delivered presentations and technical explanations during M.Tech coursework
- Guided classmates in mini-project development and problem-solving discussions

Internship Experience

Ember Quest Technology — AI / Software Intern

- Developed a conversational AI chatbot using Large Language Models and Streamlit
- Integrated backend AI logic with frontend UI for smooth interaction
- Gained experience in AI-based system design and rapid prototyping

Rooman Technologies — Java Developer Intern

- Developed web applications using Java and MySQL
- Performed coding, debugging, and testing using Eclipse IDE
- Collaborated with team members to implement application features

Karunadu Technologies Pvt Ltd — Full Stack Developer Intern

- Worked on full-stack development using ASP.NET and SQL Server
- Developed modules using C# and Visual Studio
- Contributed to system improvements and application efficiency

Projects

AI-Powered Medical Assistant (Voice & Vision Integration) (Key Project)

- Developed an AI-based system with voice interaction and visual input processing
- Integrated speech recognition and text-to-speech for conversational flow
- Applied computer vision techniques for intelligent response generation

Conversational Chatbot using LLMs and Streamlit

- Built a web-based chatbot using Large Language Models
- Designed backend logic for query handling and response generation
- Created a responsive UI for real-time interaction

DeepFake Detection Using Deep Learning

- Developed a system to classify real and fake videos
- Used CNN, LSTM, and ResNet architectures
- Performed dataset preprocessing and model training

College Management System

- Developed system to manage student and faculty data
- Used HTML, CSS, Bootstrap and SQL Server

E-Voting Application

- Built Android-based secure voting application
- Used Java, XML, and Android Studio

Publications

- “AI-Powered Medical Assistant with Voice and Vision Integration”
Journal of Zhejiang University, Vol. 53(5)
DOI: 10.5281/zenodo.19946664
- “DeepFake Detection Using Deep Learning”
Research paper on fake video detection using CNN, LSTM, and ResNet architectures.

Strengths

- Strong communication and explanation skills
- Ability to simplify complex technical concepts
- Passion for teaching and continuous learning

Languages

English, Kannada, Hindi, Malayalam, Tamil.
